About Me

Dedicated Computer Science student specializing in full-stack engineering and AI-native technologies. Passionate about building multi-agent systems, RAG pipelines, and deploying production-grade LLM applications with a strict focus on responsible AI, guardrails, and enterprise observability.

Education

Pursuing BTECH in CSE

2023–2027

PES University (Electronic City Campus), Bengaluru

Relevant Coursework: Compiler Design, Data Structures, Algorithms, Machine Learning

High school diploma - Science

2021–2023

Primus PU College, Bangalore

Professional Experience

Full Stack Software Development Intern

(June–July 2025)

Exathought Technology Consulting Pvt Ltd

Engineered image processing and Optical Character Extraction pipelines in Python utilizing PaddleOCR and OpenCV. Developed JavaScript-based Chrome extensions to automate data extraction workflows.

Subject Matter Expert

(October–November 2025)

SME at PESU I/O slot 20, mentoring and instructing a class of students on core technical concepts and academic projects.

Projects

LogRAG Sentinel | *Python, FastAPI, FAISS, FastEmbed, React, Groq (Llama-3.3)*

Architected an enterprise-grade microservice diagnostic engine using a RAG pipeline and local ONNX runtimes for zero-latency vector search. Implemented strict Responsible AI guardrails (PII masking) and context engineering to prevent LLM hallucinations. Built a React dashboard mapping AI outputs to raw retrieved logs for human-in-the-loop observability and validation.

FrameKraft | *Python, BLIP, CLIP, Llama-3.3, OpenCV, Music RAG*

AI-powered web application that transforms images into stylized visuals with matching soundtracks. Implements a 5-stage pipeline: BLIP captioning, CLIP classification, Groq stylization, OpenCV smart filtering, and a Music RAG system fetching iTunes previews from a 10K vector database.

MusiConvert | *Python, Cryptography, PyWiFi, Socket Programming, REST APIs*

Cross-platform playlist conversion and secure Wi-Fi Direct sharing tool. Facilitates internet-free transfers between Spotify and YouTube Music using AES-based symmetric encryption and Selective Repeat ARQ. Features a Rich-based terminal UI for managing automated playlist creation.

Research

MicroGraph-K8s: A Spatio-Temporal Graph Dataset for Anomaly Detection in Kubernetes Microservice Environments (Co-Author) - In Draft

- Co-authored a reproducible spatio-temporal graph dataset for Kubernetes microservice anomaly detection
- Featured labeled fault-injection telemetry to enable further model research

Technical Skills

Languages & Frameworks	· Python · Java · JavaScript · ReactJS · FastAPI · SQL
AI & LLMOps	· RAG Pipelines · Prompt/Context Engineering · Vector DBs · Guardrails
Cloud & DevOps	· Git / GitHub · Docker · Kubernetes · CI/CD Pipelines
Machine Learning	· Random Forest · SVM · CNNs · Llama-3.3 · Computer Vision

Certifications

- AWS Foundations of Prompt Engineering
- Introduction to Data Engineering on Google Cloud
- Generative AI for Beginners
- Google Foundations of User Experience Design

Media & Leadership

The Buyers Perspective — *Co-founder*

An independent media creation house covering consumer electronics and the Indian automobile scene. Roles: Host, operations, logistics, content, and design direction.

Design Leadership: Design Head (Maaya 2025 @PESU), USG Head of Design UniCon MunSOC PESU-ECC (2026), Core Member (The ECC Odyssey), Design Member (Google Developer Student Club 2023–2024).
