Technical Skills

- **Languages & Frameworks:** Python, Java, SQL
- **Cloud & DevOps:** Git/GitHub, Docker, Kubernetes, CI/CD Pipelines
- **AI-Assisted Engineering:** RAG Pipelines, Prompt/Context Engineering, Vector DBs, Guardrails, AI Output Validation
- **Full-Stack Development:** REST APIs, Fast API, Microservices
- **AI & Machine Learning:** Random Forest, SVM, CNNs, Llama-3.3, Computer Vision

Professional Experience

Full Stack Software Development Intern

June – July 2025

Exathought Technology Consulting Pvt Ltd

- Engineered automated image-processing and OCR data-extraction pipelines in Python for a major banking client, optimizing algorithms to minimize memory footprint and execution time for high-volume file processing.
- Instrumented data pipelines to identify areas for improvement, successfully prototyping and deploying upgrades that enhanced data security and structured data integrity.
- Analyzed existing implementations of Chrome extension workflows, refactoring the codebase for better space usage and collaborating with teams to deliver highly efficient automation.

Subject Matter Expert

Oct – Nov 2025

PESU I/O

- Mentored and trained students in UI/UX design principles, equipping them with practical Figma skills to create user-centered interface designs.

Projects

LogRAG Sentinel

Python, FastAPI, FAISS, FastEmbed, React, Groq (Llama-3.3)

<https://github.com/GMenOn/LogRag>

- Architected an enterprise-grade AI diagnostic microservice; analyzed and optimized local ONNX runtimes to ensure highly efficient memory and space usage during zero-latency vector searches.
- Instrumented backend logging functions to identify system bottlenecks and visualize anomalies on a dashboard, maintaining strict algorithmic efficiency.

MusiConvert

Python, Cryptography, PyWiFi, Socket Programming, REST APIs

<https://github.com/GMenOn/MusiConvert>

- Built a cross-platform secure music + playlist sharing tool with in build YouTube and Spotify compatibility with AES-based symmetric encryption, prototyping custom chunking algorithms to optimize memory usage and space requirements during large data transfers.

FrameKraft

Python, BLIP, CLIP, Llama-3.3, OpenCV, Music RAG

<https://github.com/GMenOn/FrameKraft>

- Developed and AI powered deterministic image editing pipeline that embeds image features and performs a CLIP+BLIP based image caption generation and classification linked with a MusicRAG pipeline that matches recommended songs from a dataset and fetches 30s itunes previews.

Real-Time Server Monitoring Distributed Pipeline

Apache Kafka, Spark

<https://github.com/GMenOn/realtime-server-monitoring-pipeline-kafka-spark>

- Built a real-time distributed monitoring pipeline that collects server metrics and stream them through Kafka. Processed metrics using Spark to identify abnormal patterns through window-based computations.

Research

MicroGraph-K8s: A Spatio-Temporal Graph Dataset for Anomaly Detection in Kubernetes Microservice Environments

Accepted

10th Intl. Conf. on Computational Systems and Info. Tech. for Sustainable Solutions (CSITSS-2026), RV College of Engineering

- Co-authored research analyzing distributed implementations, instrumenting Kubernetes microservices to track anomalous memory, CPU and network usage for proactive system health monitoring.

Education

PES University (Electronic City Campus), Bengaluru

2023-2027

B.Tech, Computer Science and Engineering

Relevant Coursework: Data Structures, Algorithms, Machine Learning, Computer Networks, Cloud Computing, Generative AI, Big Data, Database Management Systems and Database Technologies.

Certifications

- AWS Foundations of Prompt Engineering
- Introduction to Data Engineering on Google Cloud
- Generative AI for Beginners
- Google Foundations of User Experience Design
